

Tasks

- 1) THEB 24 - As Kritika (an owner), I want to view and accept sign up requests from service providers, so that I can vet a service provider before giving them access.
- 2) THEB 35 - As Martha (a service provider), I want to deactivate my account, so that I can opt out of being part of Amorr or offering services.
- 3) THEB-109 - As Jonathan (a customer), I would like to be able to set my profile picture.
- 4) THEB-111 - As Martha (a service provider), I want to receive an email when my bookings change, so that I don't miss any bookings.
- 5) THEB-112 - As Jonathan (a customer), I want to select my location to get providers at a given distance to me.
- 6) THEB-113 - As a developer, I would like to refine the workflow and update how information is displayed, so that I can improve quality.
- 7) THEB-114 - As a developer, I would like to refactor existing features, so that I can improve efficiency.

Identifying Dependencies

Task	Which tasks should take place before this task happens.	Which tasks should be completed at the same time as this task.	Which tasks should happen immediately after this task.
THEB 24	-	35	-
THEB 35	-	24	-
THEB 109	-	-	-
THEB 111	-	-	-
THEB 112	-	-	-
THEB 113	-	114	-
THEB 114	-	113	-

Network Diagram

Critical Path

Since all the tasks are independent, the longest path is from start to any task. Hence, there is no identifiable critical path.

How We Stay On Schedule

Since all the tasks are independent, we were able to work on them in parallel. We decided to focus on refactoring and improving the existing features and workflow so as to make our application more seamless and less complex. We encouraged increased interaction within the team so we could communicate effectively and get support from others who had worked on a feature previously, decreasing time taken to understand existing code and functionality.
